Block 0: The Extensible
Markup Language (XML)
is a subset of SGML that
is completely described in
this document. Its goal is
to enable generic SGML
to be served, received,
and processed on the
Web in the way that is now
possible with HTML. XML
has been designed for ease
of implementation and for
interoperability with both
SGML and HTML. For further
information read normal.pdf.

Block 1: The Extensible Markup Language (XML) is a subset of SGML that is completely described in this document. Its goal is

to enable generic SGML
to be served, received,
and processed on the
Web in the way that is now
possible with HTML. XML
has been designed for ease
of implementation and for
interoperability with both
SGML and HTML. For further
information read normal.pdf.

Block 2: The Extensible
Markup Language (XML)
is a subset of SGML that
is completely described in
this document. Its goal is
to enable generic SGML
to be served, received,
and processed on the
Web in the way that is now
possible with HTML. XML

has been designed for ease of implementation and for interoperability with both SGML and HTML. For further information read normal.pdf.

Block 3: The Extensible
Markup Language (XML)
is a subset of SGML that
is completely described in
this document. Its goal is
to enable generic SGML
to be served, received,
and processed on the
Web in the way that is now
possible with HTML. XML
has been designed for ease
of implementation and for
interoperability with both
SGML and HTML. For further
information read normal.pdf.

Block 4: The Extensible Markup Language (XML) is a subset of SGML that is completely described in this document. Its goal is to enable generic SGML to be served, received, and processed on the Web in the way that is now possible with HTML. XML has been designed for ease of implementation and for interoperability with both SGML and HTML. For further information read normal.pdf.

Block 5: The Extensible Markup Language (XML) is a subset of SGML that is completely described in this document. Its goal is to enable generic SGML to be served, received, and processed on the

Web in the way that is now possible with HTML. XML has been designed for ease of implementation and for interoperability with both SGML and HTML. For further information read normal.pdf.

Block 6: The Extensible Markup Language (XML) is a subset of SGML that is completely described in this document. Its goal is to enable generic SGML to be served, received, and processed on the
